

Good Morning,

Over the weekend it was declared that dental offices are allowed to reopen for routine dental care in Pennsylvania. With this news we are looking forward to seeing you all in the office very soon.

We want to give you a brief summary of what our office is doing to keep all of our patients and ourselves safe while adhering to the CDC and OSHA guidelines and even going above and beyond what is required.

1. Dr. Weiss has installed a powerful suction system in each treatment room that will filter any possible virus contaminated aerosols.
2. Disinfecting protocol has been expanded and rehearsed to kill the possibility of the COVID-19 virus.
3. Extra time has been allotted between patients to properly disinfect the office for your safety.
4. The staff has been trained on proper use of all of the personal protective equipment and procedures to maintain a properly disinfected office.
5. We will be appointing the most urgent patients first and then everyone else.

The above photo shows Gale's desk with plexiglass installed for adherence to distancing guidelines.

The above picture is the system Dr. Weiss installed that contains a dual HEPA filter.

We understand that the COVID-19 virus is not gone and we all need to be responsible and mindful until a vaccine is available. We will be calling patients today to schedule, but please call the office if you need an appointment.

Thank You,

Dr. Michael Weiss & Staff
